

Managed VPS Services

Dedicated hosting, maintenance and ecosystem support for SB-ITM clients

version 7.5.0 of June 6, 2026

Why a managed VPS service?

The operational friction is often not the trading logic. It is the technical environment around it.

No exotic installations

No client-managed desktops, unmanaged servers, ad-hoc Python setups or unsupported broker workstations.

Controlled environment

Windows Server, IB Gateway, IBC, scheduled tasks, paths, logs and releases follow one known baseline.

Faster support

Issues are diagnosed against the same folder structure, bot naming, logs and operational workflow.

The value is not only hosting. The value is full control of the SB-ITM runtime environment.

Why SB-ITM keeps full control of the environment

Trading logic can be stable while the surrounding environment creates operational risk. Standardization removes avoidable variability.

Installation drift

Different Python dependencies, paths, Windows settings and manual edits create support noise.

Broker connectivity

IB Gateway, IBC, client IDs, ports and account configuration must remain coherent.

Operational timing

Scheduled tasks, overnight reboot, startup sequence and US-market timing need a stable baseline.

Release discipline

Validated SB-ITM releases can be installed cleanly without rebuilding client-specific variants.

Managed VPS protects the production baseline and reduces avoidable installation risk.

Hosted through OVHcloud

The VPS is provisioned through OVHcloud infrastructure. SB-ITM manages the VPS configuration and the SB-ITM service layer.

OVHcloud

A global cloud and hosting provider used as the infrastructure foundation for SB-ITM managed VPS packages.

Dedicated VPS per client

Each client receives a dedicated Windows Server 2025 VPS environment.

Region alignment

Datacenter region is selected to align with the client trading timezone when available.

Anti-DDoS positioning

OVHcloud states that anti-DDoS protection is included for VPS services.

Security references

Security and compliance information depends on the exact OVHcloud service and region.

SB-ITM is not the datacenter provider. SB-ITM manages the configured VPS and ecosystem layer.

Managed VPS Technical Specifications

Each dedicated VPS runs on Windows Server 2025 Standard Edition.

One full backup is generated every night. The latest backup replaces the previous one.

Windows Server 2025

Processor

4 vCore

Memory

8 GB RAM

Storage

75 GB NVMe SSD

Bandwidth

400 Mbits/s unlimited

Baseline may be adjusted only if SB-ITM validates that the target environment remains operationally consistent.

Service packages

Three commercial tiers: infrastructure, maintenance and full SB-ITM ecosystem care.

Platinum Managed VPS Service

- Dedicated Windows Server 2025 VPS hosted through OVHcloud
- Windows Server baseline, IB Gateway, IBC and SB-ITM ecosystem installed
- Monthly VPS maintenance window on the third weekend of each month
- Installation of the last validated SB-ITM ecosystem version
- Email-based SB-ITM ecosystem operational support during the defined support window

\$180

Monthly

\$1,800

Annual

Marketplace prices in USD. Custom offer available on Fiverr.

Release 7.5.0 alignment

The managed VPS service is aligned with the SB-ITM 7.5.0 operating model and documentation set.

Control Center

Centralized access to bots, parameters, generated files, documentation and support functions. User interface configurable in up to 12 languages.

Decision Layer

Portfolio-aware candidate filtering and scoring layer integrated into the Morning Decision Chain.

Morning Decision Chain

Historical Data Warm-up, Regime Bot, Scan Bot, Decision Layer and Bridge Bot executed in sequence.

Status Dashboard

Consolidated operational view of environment, selected symbols, bot status, account data and positions.

AI PDF Report

Optional report generation using the client-provided OpenAI API key.

Scheduled Tasks

Automated operating timeline can be configured from the validated VPS baseline.

Operational boundaries

The managed VPS service is technical infrastructure and ecosystem care. It is not account management or financial advice.

SB-ITM manages

- VPS provisioning and setup
- Windows Server / RDP baseline
- IB Gateway / IBC technical environment
 - SB-ITM bot installation
- Scheduled tasks and maintenance
- Logs and release updates within scope

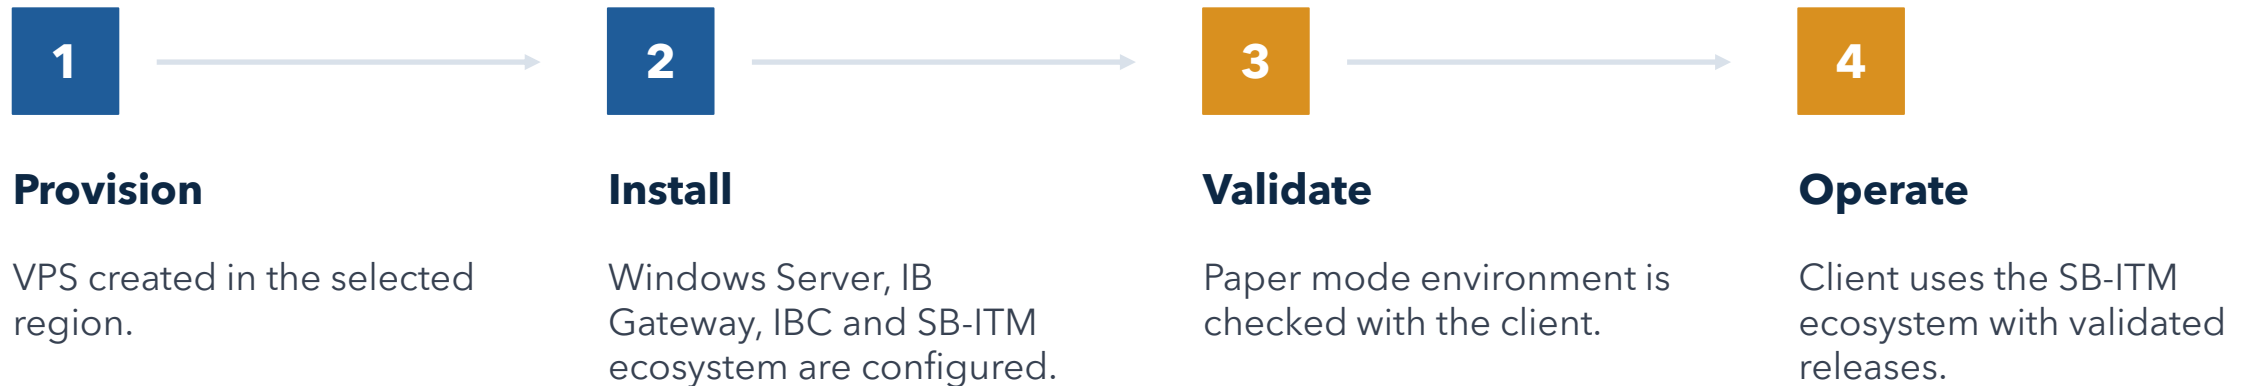

Client keeps control of

- IBKR credentials and MFA
- IBKR account permissions
 - Paper / Live decision
- Trading parameters and risk settings
 - Market data subscriptions
- Trading decisions and financial risk

This boundary protects both sides: SB-ITM delivers a controlled technical environment, while the client remains responsible for trading access, parameters and decisions.

Onboarding sequence (Platinum)

A short operational flow keeps the setup understandable for non-technical clients.

Default onboarding starts in Paper Trading mode for safe validation before any client-side decision to use Live mode.

Platinum support and maintenance window

Platinum includes email-based support for the SB-ITM ecosystem, with defined availability boundaries.

Monday to Friday | 05:00-23:00 Paris time | 11:00 PM-5:00 PM New York time

- Support is provided by email, not by 24/7 real-time monitoring.
- Support window is based on Paris time; New York equivalent may vary during daylight saving transition periods.
- Urgent infrastructure incidents are handled according to the selected package scope and provider availability.
- The client remains responsible for IBKR account access, trading mode, parameters and trading decisions.

This system is designed for autonomous operation once deployed.

Commercial positioning

SB-ITM is delivered as a managed operating environment, not as an unmanaged installation package.

This positioning protects the client experience, preserves release quality, simplifies support and keeps the technical baseline under SB-ITM control.
